Introducing touch-free Venmo and PayPal QR Code payments at CVS Pharmacy stores nationwide

NOVEMBER 16, 2020 · BY VENMO

With the winter months upon us and the holidays near, we know that many of us are navigating in-store shopping more than we have over the summer. In preparation for the busy holiday season, we're introducing touch-free Venmo and PayPal QR Code payments at 8,200 CVS Pharmacy standalone retail locations. This means you can securely pay for their items using Venmo or PayPal, without needing to touch a keypad or sign a receipt at

Competitive Analysis: Venmo

Marketing Profile: Target Audience

TARGET AUDIENCE

Usually millennials and gen x-ers or anyone who embraces and enjoys the concept and experience of social media with the convenience of cashless peer-to-peer or purchase transactions.

Competitive Analysis: Venmo

SWOT Profile

Strengths

- Cash replacement
- No fees to use except for a handful of elective features
- Pay or request money from others
- Option to split bills
- Use QR codes for identity and retail purchases
- Shows friend' activities
- Options to keep activity, public, friends or private
- Option to keep Venmo balance or transfer to bank

Opportunities

- Being able to use internationally or to send money to someone in another country is an opportunity - it can be handy for travellers.
- Enhance security check or verifications to gain more trust in the product
- Certain people are still hesitant to put actual info so most use jokes, image making the app seem childish but its dealing with a serious matter which is money.
- Not as widely accepted as a form of contactless payment in many retail stores - slow adoption

Weaknesses

- Security risk is possible - comes with social experiences, having the possibility of being hacked
- Risk of sending to wrong user if there's a spelling error in email or a wrong number is typed (and they're a Venmo user) - no way to cancel payment - it's readily available to that recipient.
- Only works while physically using the app in the US and must use US Bank Account

Threats

- Competitors: PayPal, Zelle, CashApp, GooglePay, ApplePay
- PayPal offers more security features like payment protection or dispute resolution
- Zelle makes the money available ASAP since its direct to the bank for free
- CashApp allows users to manage cryptocurrency and manage stocks - financial powerhouse
- GooglePay and ApplePay is more widely used in retail stores

Competitive Analysis: PayPal

Overview

KEY OBJECTIVES

--

One app to do it all. Send money, pay touch-free at the store and keep track of your spending all in one exceptionally simple mobile app.

--

We believe it should be simple to get, spend, and send your money. That's why our services are designed to fit into your everyday life. Whether you're shopping, splitting expenses, or getting paid for sales, we're here to help make it as easy as possible.

OVERALL STRATEGY

Send money to friends, pay for goods touch-free, and keep track of your spending with the PayPal app.

Most of their revenue is generated by the fees charged by certain transactions.

According to the article noted below, PayPal's strategy is to increase revenue through partnerships.

MARKET ADVANTAGE

PayPal's boasts of their security, it's ability to make transactions without sharing their financial information, and its ability to be used worldwide. It is the world's top processor and it is available in many countries. PayPal enable sending and receive money in several currencies, and can withdraw funds from different currencies.

Competitive Analysis: PayPal

Marketing Profile: Signage

OUTDOOR SIGNAGE AND POSTERS

Their campaign focused on putting the users first so they have one less thing to worry about (like transactions) as well as the range of what you can do with PayPal.

Competitive Analysis: PayPal

Marketing Profile: Target Audience

TARGET AUDIENCE

PayPal targets the online buyers, sellers and the tech savvy - the users and also businesses who tend to shop, send and receive money through and app.

Competitive Analysis: PayPal

SWOT Profile

Strengths

- Touch-free and cashless –, spend, send and receive money worldwide
- fraud protection, 24/7 monitoring, and secure encryption technology
- Able to create online pool / splitting checks
- Global recognition
- Making transactions without sending your financial information

Opportunities

- No option to manage cryptocurrencies
- Need an option to be able to utilize when there's no internet connection - digital wallet

Weaknesses

- Security risk is always possible - online tools are always susceptible for hacking irregardless of their security encryption
- Paypal is free for personal use if you're using it personally, but there are fees in credit card use and foreign transactions

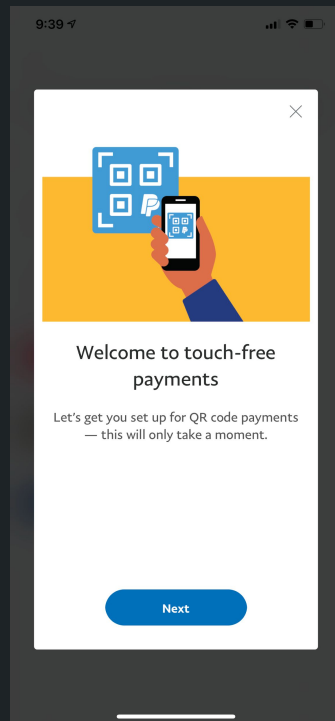

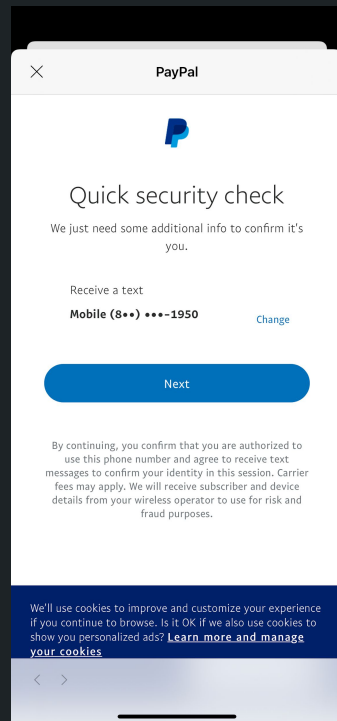

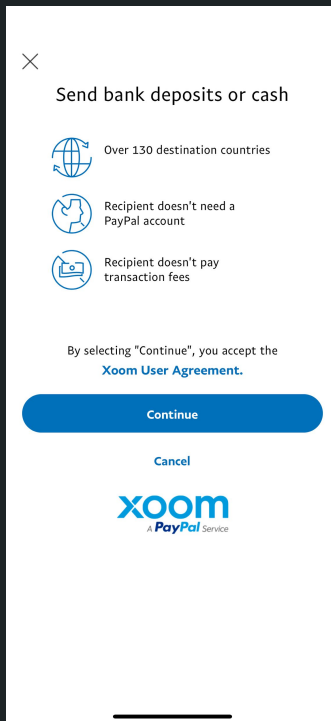

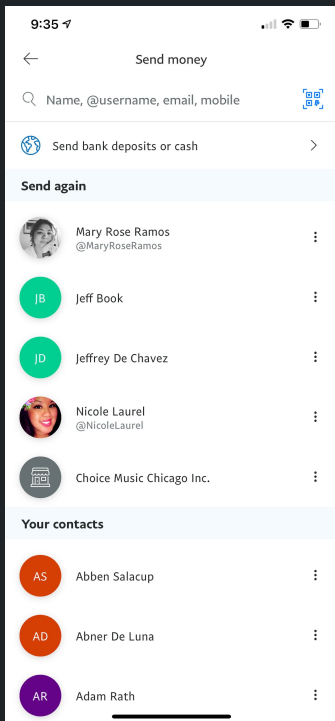

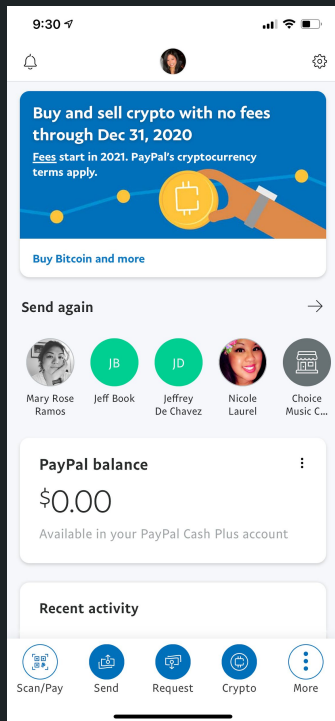

Threats

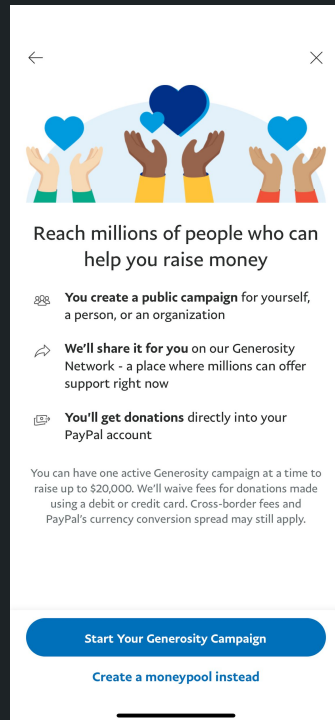

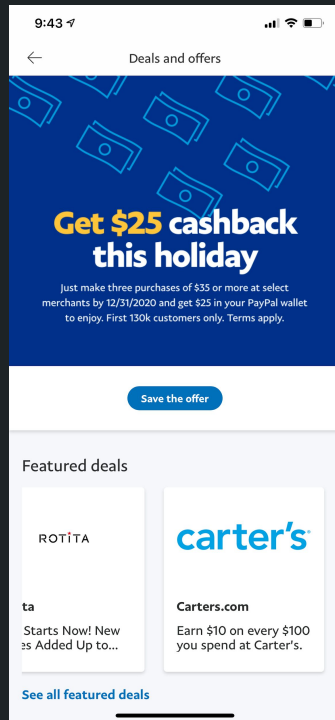

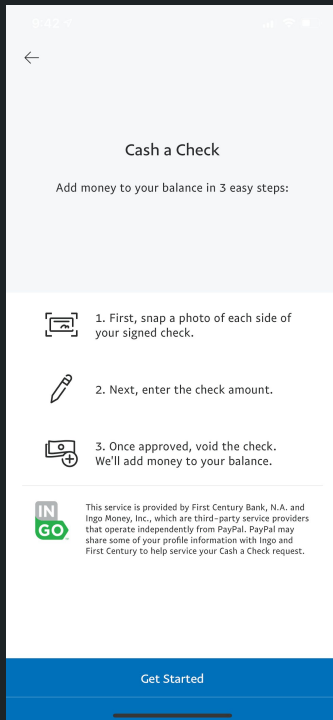

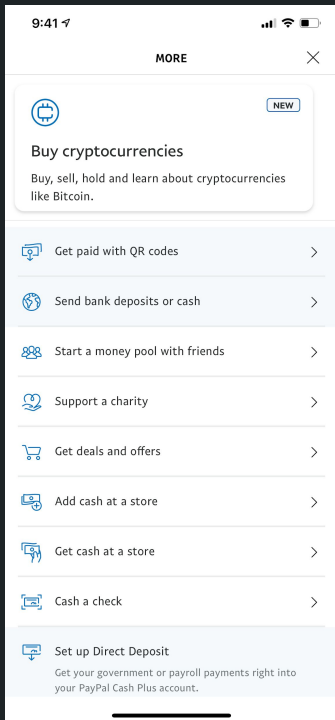

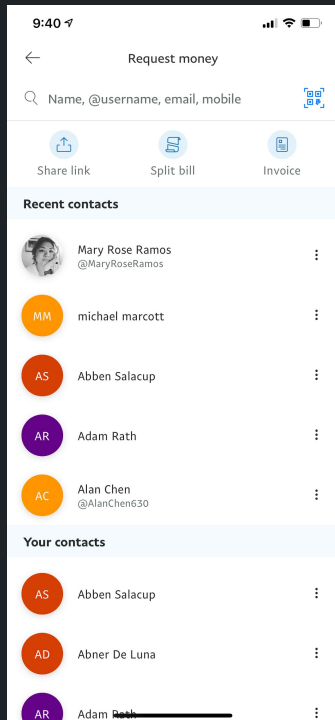

- Zelle makes the money available ASAP since its direct to the bank for free since its direct to the app
- GooglePay and ApplePay and any other digital wallet apps
- Hacking threats so PayPal needs to always be on top of security and monitoring

UX ANALYSIS

UX ANALYSIS

USABILITY

--

Ease of use comes from the simplicity of the layout focusing more on content and action items than too many bells and whistles.

Buttons are labeled properly - not much guesswork needed

LAYOUT

--

Consistent color and typography (for the most part - until you reach their partner program for sending money internationally - zoom).

Consistent use of the main color blue for CTA buttons

Layout is simplistic which enables users to locate the information they need faster
Consistent use of iconography and flat design illustration through out

NAV STRUCTURE

--

Nav structure is the common bar navigation at the bottom with 5 buttons - 3 in blue - which are action items to move money (send, request and crypto) and 2 in white which have a different role - scan/pay can show your identity to others using qr code as well as pay for purchases and the other button is "Other" that gives you other features and options. Account setting is at top right using a universal symbol for settings (cog wheel). Notifications indicator is at top left. Overall, the navigation is clean and spaced out nicely - ample space between other buttons.

UX Analysis: PayPal

COMPATIBILITY

--

Can be used on both mobile and desktop
Compatible with ios and android phones
Works on Google, Safari and Internet Explorer - browser agnostic

DIFFERENTIATION

--

What sets Paypal from its competitors is its wide adoption globally making it easy to send and receive money worldwide while being protected for purchases by their dispute center - creates a sense of safety and help develop trust. Definitely something i want to incorporate
PayPal also give you the option to donate to certain charities via the app. Creates a good friendly atmosphere - so its not all finances, you can also do good!

CALL-TO-ACTION

--

Consistent treatment of buttons makes it earlier for users to know where the CTA's are. Signup process is pretty easy to follow. A bank account is needed for sign up.

Understanding the Market

Key Takeaways

VENMO

- Contactless transaction tool
- Leverages social media to personalize the experience beyond transactions
- No fees to use except for select features

PAYPAL

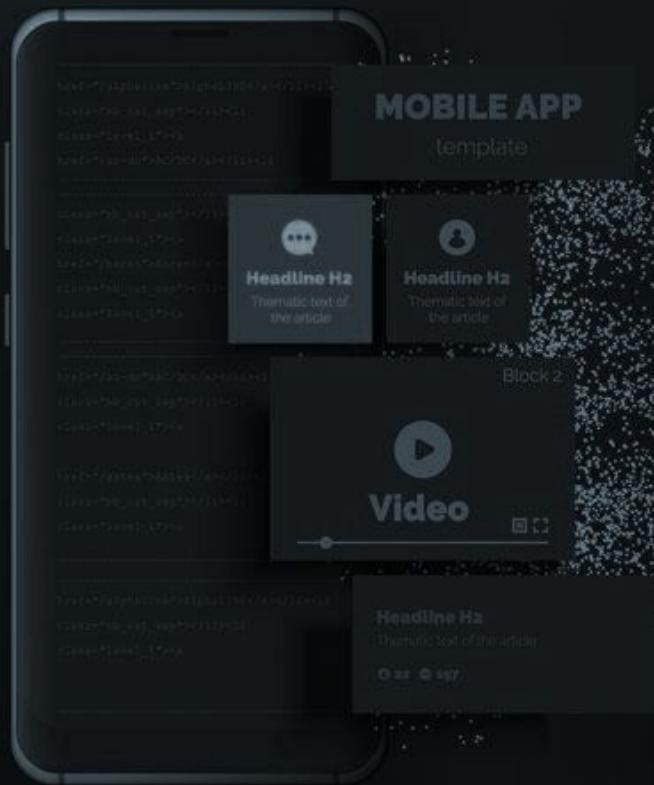

- Touch-free and cashless
- Global Recognition
- Transactions masks user financial information for safety

Venmo and PayPal share the similarity that they are both tools for wireless transactions and can be used as eWallet. While Venmo's main selling point is adding the social experience to personalize the experience, but can only be used in the United States. PayPal's popularity has global reach and their main selling point is the security of the transaction by masking the users' financial information.

With the understanding of the market, I then move to the emphasize phase of the design process journey. To empathize with the user I began with conducting a short survey to understand the motivation of people who may use an eWallet financial tool like PlutoPay.
